

REMOVING “OLYMPUS DIGITAL CAMERA” FROM EXIF DATA

Annoyingly Olympus embed in to their exif data the above caption which is then imported every time you download your images and unless overwritten or removed shows up as:

This can easily be removed when importing.

Lightroom CC

Click Metadata ...Edit Metadata Preset on Righthand of lightroom. Choose Edit Presets

Remove "OLYMPUS DIGITAL CAMERA" from the caption

Fill in anything else you want to such as copyright

At the top click "Preset" box and choose "Save settings as a new preset" Type in the name such as "Olympus Exif Cleaner"

Click Done

When you next import set the Metadata preset to "Olympus Exif Cleaner" or whatever name you have given it.

The annoying exif data will not be imported when you next import your images.

Cleaning up existing Metadata:

Metadata in existing files (Raw, PSD, JPEG, et al) can be changed by selecting the files in lightroom that you wish to change.

Go to Metadata on the Right Hand side and change Preset from None to Olympus Exif Cleaner you will see the "OLYMPUS DIGITAL CAMERA" disappear from the Caption box. You can select all the images in your catalogues at once but be aware that the process could take a few minutes. I did my whole back catalogue of 3 years within 5 minutes

Bridge

Tools > Create Metadata Template>

Tick the description box

Remove Olympus Digital Camera from Description

Give your template a name such as "Olympus Exif Cleaner"

Save

When next importing images open your Photo Downloader in the usual way

Cleaning up existing Metadata:

Metadata in existing files (Raw, PSD, JPEG, et al) can be changed by selecting the files in Bridge that you wish to change.

Go to Tools>Replace Metadata>select your new template. (Olympus Exif Cleaner)
